

LMS Platform – Frequently Asked Questions (FAQs)

This document provides commonly asked questions and answers for both College Administrators and Students using the Placement Bootcamp LMS platform. The FAQs are designed to help users understand platform functionality, program requirements, and common operational tasks.

Section 1: College / Institutional Users (TPO, Dean, Faculty SPOC)

What information is available on the College Dashboard?

The College Dashboard provides an overview of student enrollment, activation rate, overall completion percentage, progress across the five learning pillars, mentorship hours delivered, and the number of students marked as interview ready.

Can colleges track student progress across technical modules?

Yes. The system allows administrators to monitor progress in Programming Fundamentals, Data Structures basics, Web Development, Databases, and Software Development Practices.

Can colleges monitor assignment and project submissions?

Yes. The platform tracks all assignments and project submissions. Administrators can see whether students have submitted their work and whether it has been approved or requires revision.

What types of projects are included in the program?

The program includes a portfolio website, an interactive web application, a full-stack application, and a capstone project that demonstrates the student's ability to integrate multiple technical skills.

Can colleges identify students who are falling behind?

Yes. The dashboard highlights students with incomplete modules, missing project submissions, or low progress so administrators can intervene early.

Does the system monitor GitHub project requirements?

Yes. The system checks whether students have linked their GitHub profiles and tracks the number of verified technical projects uploaded to their repositories.

What is the minimum GitHub requirement for students?

Each student is expected to complete at least three verified GitHub projects as part of the program's technical portfolio.

Can the platform review GitHub repositories automatically?

The platform can fetch repository data from public GitHub profiles and provide basic metrics such as repository count and project verification indicators.

How does the platform track LinkedIn profile optimization?

The system checks for key LinkedIn profile sections such as headline, summary, and skills to ensure students have completed their professional profile.

Can colleges see which students have incomplete LinkedIn profiles?

Yes. The dashboard flags incomplete profiles and allows administrators to quickly identify students who still need to complete their LinkedIn optimization tasks.

How are resumes submitted and evaluated?

Students upload their resumes through the platform. The system checks for essential sections such as contact information, summary, skills, projects, and education before administrative review.

Does the platform check resumes for ATS compatibility?

Yes. The system performs a basic ATS compatibility check to ensure that resumes follow a structure that can be parsed by Applicant Tracking Systems.

What conditions must be met for a student to be marked as Interview Ready?

A student must have an approved resume, at least three verified GitHub projects, an optimized LinkedIn profile, and must complete a mock interview.

Who has the authority to mark a student as Interview Ready?

Only authorized roles such as Super Admin or College Admin can mark or revoke the Interview Ready status.

Can colleges track behavioral skill development?

Yes. The system tracks behavioral skill exercises such as self-introductions, story bank preparation, structured interview answers, and mock interview completion.

How does the platform support mentorship tracking?

The system records mentorship session schedules, participant attendance, and total mentorship hours delivered each month.

Is there a mentorship hour target for the program?

Yes. The program aims to deliver approximately 100 hours of mentorship per month during the pilot phase.

Can colleges export student performance reports?

Yes. Administrators can generate reports showing KPI performance, module completion, project submission rates, and interview readiness statistics.

Is student data restricted to the respective college?

Yes. The platform uses a multi-tenant architecture that ensures colleges can only access data for their own students.

Can colleges assign multiple faculty coordinators?

Yes. Colleges can assign Faculty SPOCs who can monitor student progress and assist with program coordination.

Section 2: Student Users

How do students access the LMS platform?

Students from partnered colleges receive pre-created login credentials. Direct students can create accounts using Google authentication.

What happens during the first login?

Students log in using the provided credentials and may change their password for security. A welcome email is sent after the first successful login.

What can students see on their dashboard?

The dashboard shows total course progress, progress across the five pillars, project completion status, GitHub project count, LinkedIn completion status, resume submission status, and interview readiness status.

How long is the complete learning program?

The structured bootcamp includes approximately 250 hours of learning content covering technical, behavioral, and career readiness modules.

How is course progress calculated?

Progress is calculated based on completed modules, assignments, projects, and videos that students mark as completed.

Can students mark lessons as completed?

Yes. Students can manually mark videos as completed after watching them, which updates their progress statistics.

Does marking a video as completed automatically increase progress percentage?

Yes. The platform recalculates the total completion percentage and pillar-wise progress when a video is marked as completed.

How can students track their remaining tasks?

The dashboard displays checklist indicators for pending tasks such as incomplete modules, missing GitHub projects, LinkedIn profile updates, or resume submission.

What are the five pillars of the program?

The program includes Computer Science Bootcamp, Behavioral Skills Bootcamp, Resume & Interview Readiness, GitHub Profile Optimization, and LinkedIn Profile Optimization.

Can students edit their GitHub or LinkedIn links?

Yes. Students can link or update their GitHub and LinkedIn profiles from their dashboard settings.

How many projects must students complete?

Students are expected to complete at least three verified GitHub projects as part of the technical portfolio requirement.

What is a capstone project?

A capstone project is a final project that integrates multiple technical skills learned during the program and demonstrates practical problem-solving ability.

Can students view their Interview Ready status?

Yes. Students can see their readiness status on the dashboard, including Not Eligible, Under Review, or Interview Ready.

Can students mark themselves as Interview Ready?

No. This status can only be assigned by authorized administrators after verifying readiness requirements.

Will students receive notifications from the platform?

Yes. Students receive email notifications for account creation, password reset requests, project submissions, mentorship reminders, and interview readiness updates.

Can students access other students' data or progress?

No. Students can only view their own information to maintain privacy and security.

What happens if a student forgets their password?

Students can request a password reset from the login page. A reset link will be sent to their registered email address.

Are mentorship sessions mandatory?

Mentorship sessions are strongly recommended as they provide guidance, feedback, and industry insights that help students prepare for interviews.

What is the main goal of the program?

The goal is to help students become industry-ready by building strong technical skills, communication abilities, professional profiles, and interview readiness.

Who should students contact if they face platform issues?

Students should contact their college program coordinator or the platform support team if they experience login issues or technical problems.
